**Description of Activity**

It is well established fact that science impacts all aspects of our lives as well as the planet we live on. Many women scientists have made contributed in the development for science and technology. It is well known fact that Marie Curie, a physicist and chemist who conducted pioneering research on radioactive decay. She was first woman to receive a nobel prize in physics and became the first person to receive a second nobel prize in chemistry. For the development of science, women have made important contributions to science from earliest times. It is responsibility to know and explore the contribution of women in science.

The reality toady is that most benefits accrued from science have not reached the majority of people. Science has been one of the main driving forces of the economic growth of nations. Most developed countries have generated new technologies with potential to result in dynamic economic performance. As creators of new knowledge, the researchers must focus their work on nationally and globally important and competitive area of research which is multidisciplinary in nature.

To meet the present day for exploring the contribution of women in science, the young students and society needs to encourage using their potential towards science based innovation.
